Pump Care Instructions:

- When using a pump, we suggest that the pump opening is covered to protect the product from insects, fermentation and mold. This can be done with plastic wrap or by using the black pump cover that comes with every Monin pump.
- When changing pumps, we recommend that the bottle opening is covered to protect the product from insects, fermentation and mold.
- We do not suggest the washing of pumps as this could contaminate the product with detergent or water if the pumps are not completely dried or could result in flavor transfer if the pumps are reused on differing flavors.
- When reusing a pump or cap make sure it is from the same flavor so there is no flavor transfer.
- Pumps can be reused for an indefinite period with the same flavor as long as there is no contamination or spoilage.
